

Auxiliary materials for outdoor splicing of optical cables

Overview

Successful outdoor termination relies on specialized materials such as waterproof splice closures, weather-resistant connectors, and corrosion-resistant terminals. Its material selection and construction are crucial to ensuring the transmission performance and service life of the optical cable. Prysmian has a comprehensive portfolio of joints to manage the splicing and distribution of optical fibres throughout. Various cables require outdoor termination, including fiber optic cables, coaxial cables, and power cables. For example, fiber optic cables need precise alignment of optical fibers for minimal signal loss, while coaxial cables. The first-generation hybrid cable (hybrid cable 1). It is mainly used to connect a hybrid optical-electrical switch to an AP or a remote unit so that the switch can supply PoE power and transmit data to the AP or remote unit. At Fiber4u, we support your projects with high-quality splicing materials.
