Power distribution in the data center For over 100 years, power distribution has been a large part of our identity. For the first time ever, engineer Konrad Zuse constructed an automatic computing machine – the Z3 – for the four basic arithmetic operations plus finding roots using. The Vertiv™ Powerbar patented range of busbar trunking adds overhead power distribution to your data center, allowing increased accessibility to power loads for maintenance. Circuits can be added and removed easily as they are located just above their respective racks. This white paper will address the power distribution and monitoring solutions that have been successful in meeting these demands, and how data centers can be designed to create sustain-able IT environments that are capable of satisfying evolving busine ory.
