

# Concealed waterproof sockets installed in construction site electrical distribution boxes

## Overview

This article examines how modern portable power cabinet systems—such as E-label distribution boxes paired with industrial waterproof plug connectors—improve temporary power safety on construction sites. Innovation is the driving force behind its development. With an increasing investment in research and development (circa 5% of sales) and more than 3,700 active patents, the Legrand Group is focused on maintaining work requires electrical power for many purposes. The waterproofing of industrial electrical plugs and sockets is mainly reflected by the IP rating. The two digits after IP indicate the solid protection level and liquid protection level. We will explore the importance of IEC-60309 plugs in construction, focusing on their role in safety, their design features, and why they are crucial for various power requirements on construction sites. Typically installed on equipment or devices. These components exhibit enhanced current-carrying capacity.
