

# Fiber Optic Cable Suspension Terminal

## Overview

Professional-grade hardware for supporting and anchoring ADSS (All-Dielectric Self-Supporting) cables in FTTX aerial networks. Designed for stable span performance, controlled tensile load, and long-term outdoor durability. Suspension clamps support ADSS cables at. The FIBERLIGN Suspension uses a combination of structural reinforcing rods (SRR), outer rods, housing halves, and resilient inserts to reduce compression, clamping, and bending stresses on OPGW and the optical fibers within it. SRR and outer rods cannot be reused. Hardware components can be reused. Fiber Storage Units (FSU) are used to conveniently store an extra length of cable along the ADSS cable run for later use. Tension clamps. The unique design of the lightweight AFL Mechanical Suspension supports spans of optical ground wire (OPGW) cable through a wide range of line angle changes. The clamps feature adjustable tensioning.
