

# Grounding main line of the main distribution box

## Overview

Attach a ground wire from one of the threaded studs (A) at the bottom of the housing, to the mounting plate (B). The ground resistance between all system parts shall be  $<$ . Power from factory ground must be installed by a qualified electrician. Each DISTRIBUTION BOX and controller must be grounded. 26 mm<sup>2</sup> (10 AWG) ground wire must be used, and in all other markets a 6 mm<sup>2</sup> must be used. Equipment Protection: Grounding protects substation. Today, we're diving deep into the world of distribution box grounding, breaking down the standards, and shining a light on those sneaky mistakes that even experienced electricians sometimes make. Protective grounds must be installed so all phases of lines or cable are visibly and effectively bonded together in a multi-phase. According to NEC Article 250, both the neutral and ground wires must be connected only in the main panel or at the first service disconnect.
