

How many optical splitters can a 1:128 splitter connect to

Overview

1:128 splitter: Splits one signal into 128! The 1:128 splitter is currently the maximum available splitter configuration in most practical networks. That means one fiber line can serve up to 128 homes or businesses. Wait. won't the signal get weak?

Great question! Yes, it can. The planar-lightwave-circuit optical splitters shall be in a discrete form factor for use in wall-mounted PON enclosures. A fiber broadband provider typically determines and overall split ratio for the network, such as 1x32 or 1x64, and uses combinations of splitters to meet that ratio with each PON port. In this guide, we'll explain how to safely connect a splitter to another splitter, covering both fiber. Optical splitters, encompassing FBT (Fused Biconical Taper) couplers and PLC (Planar Lightwave Circuit) splitters, are prevalent passive optical devices designed to divide fiber optic light into multiple segments based on a specified ratio.
