

Is the fire cable tray a trough type or a ladder type

Overview

Trough (Ventilated) Tray: Features a ventilated bottom, offering a balance between the strength of a ladder tray and the protection of a solid bottom. A cable ladder, also known as a ladder cable tray, is a support system that consists of two longitudinal side rails connected by individual rungs. Each cable tray type performs a different function and comes in various materials such as aluminum. Commonly known as: ladder tray, cable runway. A cable ladder has a range of straight lengths and different shaped fittings designed to facilitate changing cabling directions or levels easily, without the need to modify any components. Other common names: ladder tray, cable runway Simple. Deciding on using a cable tray or a cable ladder is one of the most significant decisions in construction work. Both systems hold wires, but they do not operate in the same way. When the incorrect one is selected, the wires may become overheated, or the metal support may even fracture under the.
