

# Is there a potential increase in the construction of IDC data centers in West Asia

## Overview

The US and China are home to the most data centres, but we expect growth to be skewed towards developing Asia as the region has a growing tech sector and supportive government policy aimed at developing its telecommunication infrastructure and attracting investment from. The US and China are home to the most data centres, but we expect growth to be skewed towards developing Asia as the region has a growing tech sector and supportive government policy aimed at developing its telecommunication infrastructure and attracting investment from. An increase in the construction of data centres is driving economic growth. This article is part of: World Economic Forum Annual Meeting The surge in data centre construction and AI-related spending has become a significant driver of business investment and GDP growth, especially in the United. Nearly 100 GW of new data centers will be added between 2026 and 2030, doubling global capacity. The global data center sector will likely expand at a 14% CAGR through 2030, which will require energy innovations to alleviate grid constraints. Hyperscalers will remain a key driver of sector growth. McKinsey analysis finds that globally, capital expenditures on data center infrastructure (excluding IT hardware) are expected to exceed \$1.7 trillion by 2030, largely because of the expansion of AI, the proliferation of edge computing, and advancements in high-performance computing (HPC).
