

Key Components of CFO Optical Modules

Overview

An optical module works at the physical layer of the OSI model and is one of the core components in the fiber communication system. It mainly consists of optoelectronic devices (optical transmitter and optical receiver), functional circuits, and optical bores. This helps data move faster and saves. Co-Packaged Optics (CPO) is a technology and design approach where optical components, such as lasers and photodetectors, are integrated alongside electrical components, like Application-Specific Integrated Circuits (ASICs), within the same package. This integration significantly reduces the. This document provides guidance on the requirements for co-packaged optic assemblies designed for high-radix, network switch applications with 100Gb/s electrical interfaces. Introduction The CPO JDF plans to release three documents focused on different elements of Co-Packaged Optics (CPO): the. OFC 2025 made one thing clear: The transition to Co-Packaged Optics (CPO) switches in data centres is inevitable, driven primarily by the power savings they offer.
