

Main power distribution box and sub-distribution box at construction site

Overview

This includes a connection point (for example via a site connection box), the main distribution with protection and metering devices, sub-distributions, cables, plug systems, as well as organizational measures for operation, testing, and maintenance. A reliable construction site power connection is the foundation for safe workflows, predictable schedules, and the efficient use of electrically powered equipment. This applies to tower cranes, lighting, containers, and tools as well as to hydraulic power packs that supply concrete demolition. A construction power distribution box is an essential part of a construction site as it ensures that the power needs of all the equipment and machinery on the site are met. The main distribution box (or distribution room) shall be set up. They also include metering systems, ensuring.
