

# PLC optical splitter module

## Overview

A PLC splitter, or Planar Lightwave Circuit splitter, is a crucial passive optical device used in fiber optic networks. Its primary function is to divide a single optical signal into multiple output signals, allowing for efficient distribution of light across various paths. Corning's QuickPath™ PLC optical splitters reduce insertion loss and deliver high performance. These devices enable more effective monitoring and management of optical networks. Broadex Technologies' Planar Lightwave Circuit (PLC) splitter is a passive optical power management device that uses silica waveguide structures to evenly split an optical signal from 1 or 2 input channels and distribute the split signal to N multiple output channels, commonly described as 1xN or. FiberMania's PLC (Planar Lightwave Circuit) Fiber Splitters deliver high-performance and cost-efficient solutions for precise and reliable optical signal distribution.
