

Passive Connection Method for Distribution Box

Overview

Passive distribution boxes provide compact and easy solution for connecting sensors and actuators to the control cabinet via pre-moulded or self-wire M12 or M8 connectors. Ideal for harsh industrial conditions through vibration and shock resistance. Murrelektronik supplies a comprehensive range of distribution boxes: They create optimum installations for any application and are cost-effective, reliable. Many styles to choose from: 4-, 6-, 8-, 10- or 12-ports, with or without LED operation and function indicators, M8 (pico) or M12 (micro) I/O connection, top- or side-entry I/O mount, with integrated control cable. They offer considerable cost saving benefits when compared to hard-wiring I/O connections due to their pre-wired connector slot configurations which enables numerous sensor and actuator signals to be transmitted back to a control system Bulgin's passive distribution boxes feature industry standard. Passive distribution boxes provide structured and reliable distribution of digital signals within industrial automation systems.
