

# Patch cable with one end plugged into the fiber optic box and the other end plugged into the optical module

## Overview

A fiber patch cable is a fiber optic cable with connectors on both ends. They are also called fiber jumpers. They are generally sold in large quantities, rather than custom-made, although quite special models are also. A fiber optic patch cable (also called a fiber jumper or fiber patch cord) is a section of optical fiber cable with connector terminations on both ends, designed for flexible, short-distance interconnections within an optical network. It is composed of fiber optic cable and fiber connector that fixed at both ends of optical cable, has been widely used in various fields such as fiber optic. This guide explains what fiber patch cables are, their types, connector standards, where they are used, and how to choose the right one for your data center. It is designed for flexible. As networks move to higher speeds and higher density, choosing the right fiber optic patch cords becomes critical to the reliability of your system.
