

# Precautions for Fiber Optic Cable Routing and ODF Interconnection

## Overview

This guide highlights essential precautions including wearing protective gear, disconnecting power sources, handling fiber scraps carefully, avoiding face or eye contact, following regulatory standards, using adequate lighting, and keeping food or beverages away from work areas. The Fiber Optic Association, Inc. (FOA) was founded in 1995 to help develop the workforce to build the fiber optic networks to support a rapid expansion in communications and the Internet. The charter of the FOA was to promote professionalism in fiber optics through education, certification, and recommendations for Fiber Optic Cable Installation. Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. During installation, all curvatures should be smooth. The information contained in this manual should serve as a guide to proper handling, installing, testing, and for troubleshooting problems with fiber optic cables.
