

# The gigabit light on the fiber optic router is not on

## Overview

If no lights are illuminated on your fiber router it's likely not powered on: Confirm that the power cord is securely connected from the Power port on the back of the router into a working electrical outlet. On the back of the router, check the On/Off button to confirm that it's. The tables in this article provide detailed information about the possible appearances of the LED lights on each device, the possible causes of each state, and what you should do. Ensure your Fiber Jack is connected to the network and the LED lights are connected and working properly before moving. Before I tell you a simple trick to switch on the internet light and restore your internet connection, let us know about the different LED lights on the modem-cum-router. Depending on the brand and model of the router, the color. Learn what each light on your fiber equipment means—from power and fiber signal to Ethernet and phone service—and how to quickly troubleshoot issues. This light shows whether your ONT is getting power. POWER Normal: Solid/stagnant light. PON (Passive Optical Network) Normal: Solid. The indicators on the router should be lit to access the internet on computers and phones. As I explained meaning of ethernet lights in previous post.
