

The internet cable at home is fiber optic

Overview

Fiber-optic internet is a type of broadband technology that uses light and glass cables to deliver an internet connection to your home. A small box on the outside of your home called a NID is installed and the fiber is coiled in there and connected to a fiber that runs into the home. The fiber is connected to an. This article will give you an overview of the use cases for fiber-optic networking, some of the terms used in fiber networking, and suggestions for setting up a fiber network. Once you understand the basic concepts, you can check out my Recommended Equipment section toward the bottom of the. "Fiber to the home" describes the use of fiber optic cable to deliver broadband internet from a central location directly to private residences. In an FTTH network, fiber cable is used over the "last mile" in place of lower bandwidth DSL and coaxial wires. Fiber optic cables use light to transmit data, whereas traditional cables rely on electrical signals, which are more prone to interference and loss over distance.
