

Transformer relay protection projects include

Overview

This guide explains the main types of transformer protection, including differential protection of transformer, overcurrent protection, restricted earth fault (REF) protection, and mechanical protection devices such as Buchholz relays. Setting procedures are only discussed in a general nature in the material to follow. In some cases, a user may apply the techniques described in this guide for protecting. ABB's transformer protection relays are used for protection, control, measurement and supervision of power transformers, unit and step-up transformers, including power generator-transformer blocks in utility and industry power distribution networks. A turn-to-turn fault will resu contains substantial harmonics, particularly the second harmonic. These harm time during each cycle where the current magnitud unit (PU) on transfo acteristics that relate fault-current magnitude to.
