

UK spot AOC active optical cable 1 6T

Overview

6T LPO OSFP active optical cable modules are designed for use in 1. Forward error correction (FEC) is required to be implemented by the host in order to ensure reliable system operation. They are compliant with the OSFP MSA, IEEE802. These AOC assemblies are QSFP DD MSA compliant, also backwards port compatible with existing QSFP modules and provide flexibility for end users and system designers. The QSFP DD AOCs operate up to 25Gb/s NRZ modulation and provide solutions up to 200Gb/s aggregate bandwidth, supporting 100meters. Active Optical Cables (AOCs) are Multi-Mode (MM) or Single-Mode (SM) transceivers that have a bonded fiber connection. Use these cables for rack interconnect and breakout applications in leaf spine topologies where error free data and video transmission needs to be guaranteed. The signal integrity severely stressed under high-speed data transmission is enhanced via advanced. Got a question?
