

# Ultra-high voltage substation relay protection

## Overview

Electro-mechanical relays specifically designed for high voltage protection and control applications. Multi-contact high-speed trip relays ensure fast operation of less than 8 ms with unique patented design. Topology ensures minimal contact bounce. The most important of these are: transmission and distribution lines emanating from the station, step-up and step-down transformers, station buses, breakers, shunt and series reactors and shunt and. Apply advanced protection and monitoring with flexible communications to two-, three-, and four-terminal transformers. Protect and control grounded and ungrounded, single- and double-wye capacitor bank configurations. Not finding the product that you're looking for?
