

Welding the outer corner of the distribution box

Overview

This arrangement is common in box or frame constructions. These joints can be welded along the inside corner or the outside corner, and various types can be applied, such as fillet, bevel, J-groove, or edge welds (see Figure 2 below). Weld sequence and clamping. This Video shows tips and techniques for Tig Welding outside corner joints. Often a press brake or sheet metal brake is used to eliminate as many welds as possible but ultimately an outside corner weld or 2 or 3. In the manufacturing process of metal distribution boxes, welding constitutes a critical stage following sheet metal cutting and bending. This step ensures the structural integrity of the enclosure by securely joining individual panels into a cohesive unit. This type of welding is commonly used to join metal sheets together, as well as pipes and other tubular materials.
