

# What are aerial fiber optic cable equipment

## Overview

Some of the common tools include aerial storage for cables; telescoping poles; fiber heat shrink tube; brackets; blocks; cable saddles; fiber suspension clamp; cable rings, horizontal fiber splice closure, dome fiber splice closure, fusion splicers, etc. Aerial work mixes mechanical engineering (span, sag, tension), careful selection of cable types (ADSS, figure-8, lashed) and a disciplined safety-first attitude. This article explains the common aerial cable types, the hardware you'll actually use on poles and span ends, and the safety practices. Aerial fiber optic cable is a type of optical fiber transmission cable used for aerial deployment, suspended on towers, poles, or other supports, suitable for communication needs spanning long distances and connecting different areas. It consists of several optical fibers enclosed within a protective sheath, which shields the delicate fibers from external. Aerial Fiber Cable is the answer. This means you'll cut down on labor costs and reduce installation time—making it a budget-friendly option for expanding your network.
