

What are the reasons for the oversupply of special optical cables

Overview

It is driven by a combination of factors, but broadly speaking, it includes continuing fibre broadband rollouts, the expansion of 5G, and the building of more data centres needed to store and distribute the massive amounts of data powering our global digital world. Due to its greater bandwidth and reliability – compared to the likes of DSL and copper cabling – fibre optic technology is the preferred connectivity option for many. It was reported that FTTH/B dominated the global fixed broadband subscriptions with a share of 66.7%. The pressure being placed on. As reported by Anna Gross for Financial Times (FT.com), the market intelligence firm Cru Group has now revealed that a worldwide shortage of fiber-optic cable has driven up product pricing and lengthened lead times on supply, casting a shadow over ambitious industry plans for advanced. The global demand for fibre optic cable continues to grow rapidly. Now, many providers are turning to optical fiber, pushing it deeper into their networks to meet their.
