

What instruments are needed for attaching optical cables in communication systems

Overview

Fiber optic tools are specialized instruments designed for installing, terminating, splicing, testing, and maintaining fiber optic cables. Unlike copper cabling, optical fiber requires precise handling, clean end faces, and accurate measurement to avoid signal loss and performance degradation. These instruments are pivotal in the installation of new networks and the maintenance and testing of existing ones. Cutting, preparing, and terminating optical fiber cables requires its own set of specialized tools and skills, and is not without unique hazards. Optical fibers. ITU-T has been active in the standardization of optical communications technology and the techniques for its optimal application within networks from the infancy of this industry. However, it is not always easy to find out what has been covered, and where it can be found.
