

Why should fiber optic cables have pre-installed socket wiring

Overview

Thus, many users prefer them in fiber patches and pre-terminated enclosures. Installing these wires in a network also takes less time and skill than traditional methods. Greater performance since the manufacturers terminated the cables with high-quality, compatible. That means pre-installing fiber optic wiring. So, if you're building a new home or in the process of renovating, it's the perfect opportunity to future-proof your living space by installing fiber. My Mum is very BT-loyal, only has BT-branded equipment, and has only ever engaged BT engineers to supply and fit hardware, sockets and wiring around the house. When I went to visit her last week I was really surprised at the fact that the engineer visit last month had left most of her existing. A fiber wall socket (also called an optical termination outlet or FTTH outlet) is the critical endpoint where your home's fiber optic cable connects to the Optical Network Terminal (ONT). Unlike traditional copper wiring, fiber optics can. Fiber optic pre-wiring is the foundation that supports and enhances the capabilities of your smart home.
